PROFESSIONAL SUMMARY

Graduating Computer Engineering student with hands-on experience in software development, embedded systems, robotics, networking, and technical support. Passionate about leveraging technology to solve real-world problems through innovative and efficient solutions. Recognized for strong analytical thinking, adaptability, and collaborative teamwork, with a commitment to continuous learning and professional growth. Eager to contribute technical expertise and a results-driven mindset to a dynamic organization.

EXPERIENCE

Northern Mindanao Medical Center (*IT Department*)

On-the-Job Training *February 2026 - May 2026*

- Developed web-based system features and modules to support hospital operations, improving workflow efficiency and user accessibility.
- Designed responsive front-end interfaces using modern web technologies, enhancing usability and user experience for staff members.
- Provided technical support for hardware, software, and network-related issues, ensuring minimal downtime and uninterrupted operations.
- Configured and maintained network devices and connectivity solutions, helping improve system reliability and communication across departments.
- Implemented software improvements based on user requirements and feedback, increasing system functionality and operational effectiveness.
- Resolved technical issues through systematic diagnosis and corrective actions, reducing recurring support requests and improving user satisfaction.

PROJECTS

IoT - Enabled Ticketing and Web-Based Queue Monitoring System for the Outpatient Department of Public Health Services (Thesis)

- Designed and developed an IoT-enabled ticketing and queue management system that streamlines patient flow through automated ticket generation, QR code integration, and real-time queue monitoring. Built a web-based dashboard for staff and healthcare providers to manage queues, track patient status, and improve operational efficiency. Reduced congestion and enhanced patient experience through centralized data management and remote queue access.

Arduino-Based Robotics Projects (Obstacle Avoidance Robot & SumoBot)

- Developed Arduino-based robots capable of autonomous navigation, obstacle detection, and competitive sumo operations using sensors, motor control, and embedded programming.

Real-Time Accident Detection System using ESP32

- Developed an ESP32-based accident detection system that uses sensor data and threshold-based logic to automatically detect impact events and enable real-time monitoring.

EDUCATION

Bachelor of Scinece in Computer Engineering - University of Science and Technology of Southern Philippines | August 2021 - June 2026 (Expected)

***Certifications*:** Real Time Accident Detections System Using Esp32, CCNAv7 - Switching, Routing, and Wireless Essentials, CCNAv7 - Enterprise Networking, Security, and Automation, Networking Essentials, Cybersecurity.

SKILLS

Technical Skills: Software Development, Front-End Development, Web Development, Embedded Systems, Internet of Things (IoT), Robotics Programming, Arduino Development, ESP32 Development, Networking, Technical Support.

Personal Skills: Problem Solving, Critical Thinking, Analytical Skills, Team Collaboration, Adaptability, Time Management, Attention to Detail, Project Management, Continuous Learning.
